

Empathy Map

Date	29 June 2026
Team ID	SWTID-2026-8096
Project Name	Rising Waters: A Machine Learning Approach to Flood Prediction
Maximum Marks	4 Marks

Empathy Map

Our empathy map shows that our project is designed to solve real user problems by:

- Predicting floods before they happen using AI and Machine Learning.
- Sending early warnings to users.
- Giving people enough time to evacuate and protect their belongings.
- Reducing panic by providing accurate and reliable information.

The empathy map helps us understand the needs, concerns, actions, and emotions of people living in flood-prone areas. It ensures that the Rising Waters system is designed to provide timely, accurate, and user-friendly flood predictions that improve public safety and reduce the impact of floods.

SAYS

- "I NEED AN EARLY WARNING BEFORE FLOODS OCCUR."
- "I DON'T KNOW WHEN THE WATER LEVEL WILL BECOME DANGEROUS."
- "I WANT RELIABLE FLOOD ALERTS ON MY PHONE."

THINKS:

- "WILL MY FAMILY BE SAFE IF FLOODING STARTS SUDDENLY?"
- "CAN I TRUST THE FLOOD PREDICTION SYSTEM?"
- "HOW CAN I PROTECT MY HOME AND BELONGINGS?"

DOES:

- CHECKS WEATHER FORECASTS REGULARLY.
- MONITORS LOCAL NEWS AND GOVERNMENT ALERTS.
- MOVES VALUABLES AND PREPARES FOR EVACUATION DURING HEAVY RAINFALL

FEELS

- WORRIED DURING HEAVY RAINS.
- STRESSED ABOUT THE SAFETY OF FAMILY AND PROPERTY.
- RELIEVED WHEN RECEIVING ACCURATE AND TIMELY FLOOD WARNINGS.
